AYUBES Capsule Contains:

Ingredients	Mode of Action
<i>Gymnema sylvestre</i> leaf Extract	Hypoglycemic, hypolipidaemic, wound healing, diuretic, stimulates insulin secretion
<i>Momordica charantia</i> fruit Extract	Hypoglycemic, anti-oxidant, anti-stress, immuno-modulatory, wound healer
<i>Syzygium cumini</i> seed Extract	Anti-diabetic, diuretic
<i>Encostemma littorale</i> herb Extract	Hypoglycemic
<i>Picrorhiza kurroa</i> root	Wound healing

Most important ingredients of AYUBES capsules are:

Gymnema sylvestre is called "sugar destroyer":

- It's main function is blood sugar regulation and glucose metabolism
- It has a molecular structure similar to sugar, it blocks and inhibits a large percentage of sugar absorption and has the incredible ability of severing ones desire for sugar
- Reduces glycosylated hemoglobin and glycosylated plasma proteins
- Its active component gymnemic acid, stimulates the insulin secretion from pancreas

Momordica charantia Extract:

- Increases glucose utilization by liver
- Contains an insulin like polypeptide, polypeptide-P, which lowers blood sugar levels
- Has a hypoglycemic effect (ability to lower blood sugar levels) on the body. Considerably improves glucose tolerance levels in diabetics
- Improves blood sugar levels by increasing glucose uptake and glycogen synthesis in the liver, muscles and fat cells
- Promotes a balanced storage of glucose in the liver as glycogen, supports healthy insulin secretion, peripheral glucose utilisation, and healthy serum protein levels
